PREFACE

This summary report contains information on "new" and "change" targets, order of battle information, and those targets which reflect no apparent change in facilities since the most adequate previous NPIC description.

Items are arranged in sections.

The "Summary" section provides short descriptions of targets newly identified or known, but reported for the first time by NPIC; previously reported targets showing major change, or those where an analysis of current photography furnishes more precise information; and order of battle information on targets where order of battle can be identified.

The "NAC" section provides a listing of those targets which reflect no apparent change in facilities from the most adequate previous mission. The mission in which this description appears is designated by the appropriate mission number, prefixed by the letters "NAC," and appears as the last entry on the photo reference line. Installations where there is no major change in facilities and where no order of battle can be determined are listed under this section.

Where there are no "Summary or NAC" targets, the appropriate section is omitted.

All targets are arranged 1) by country, 2) within the country according to subject, 3) within the subject by WAC (World Aeronautical Chart) area, and 4) within the WAC area by geographic coordinates in ascending order.

The map base used for derivation of coordinates is the best available among these series: US Air Target Chart, Series 200; AMS, 1:50,000 and 1:250,000; DIA

JOG (A) or (G) 1:250,000; ONC, 1:1,000,000; and IMW, 1:1,000,000.

The header line for each target contains, reading from left to right, the target name, the geographic coordinates, the WAC number, the BE (Bombing Encyclopedia) number, and the NPIC target number.

The COMOR target number, when available, appears above the photo reference data.

Photo reference data includes frame numbers, and symbols denoting limiting conditions, photo interpretability, target coverage, and the mode.

Symbols for limiting conditions affecting photography are C (clear), SC (scattered cloud cover), HC (heavy cloud cover), H (haze), CS (cloud shadow), S (snow), O (obliquity), SD (semidarkness), GC (ground cover), CF (camouflage), and GR (ground resolution).

Interpretability of the photography is categorized as G (good), F (fair), and P (poor). Target coverage is denoted by the symbols T (total) or PT (partial). The mode of coverage is indicated by ST (stereo), NS (nonstereo), or PS (partial stereo).

When appropriate, an index is included with targets arranged alphabetically within a country.

AAA defenses are divided into four categories: light (21-75 mm), medium (76-100 mm), heavy (over 100 mm), and automatic weapons (ZPU-1, ZPU-2, and ZPU-4). Where a category cannot be determined, the site will be listed as an AAA site and the number of guns indicated (example: 6-gun AAA site, occupied/unoccupied).
